OBJECTIVE

Machine Learning Engineer with expertise in large-scale recommendation systems, ranking, and applied deep learning, spanning ML research and production deployment. Experienced in leading ML projects and mentoring engineers to drive user engagement and business impact. Seeking full-time Senior MLE roles.

EDUCATION

B.S. Information & Industrial Engineering, Yonsei University

2013 - 2020

SKILLS

Programming Languages Go, Python

EXPERIENCE

Senior MLE & Tech Lead

Apr 2022 - Present

Karrot (Daangn)

Seoul, Republic of Korea

- Tech Lead, Vertical Part, Feed Quality Team (Aug 2025 - Present): Unified 5 service-specific ranking models into one model, lifting Home Feed dwell time by +2.6% while cutting weekly pipeline cost by 10M KRW; introduced and scaled Short-form recommendations, growing impressions 50x (36M to 1.8B) in one year.
- Tech Lead, Diversity & Serendipity Part, Feed Quality Team (Sep 2024 - Aug 2025): Led diversity initiatives, increasing new service clicks by +20–25% through optimal exposure methods.
- ML Engineer, Feed Quality Team (Feb 2023 - Sep 2024): Designed a scalable retrieval pipeline, improving Home Feed engagement (+3–5% chats); deployed a ranking model for the Short-form feed, improving CTR by +15–20%.

ML Engineer & Tech Lead

Feb 2020 - Mar 2022

Kakao

Seoul, Republic of Korea

- Tech Lead, Research Part, Recommendation Team (Jan 2022 - Mar 2022): Led a two-stage deep learning recommendation POC; mentored interns and junior engineers.
- ML Engineer, Recommendation Team (Feb 2020 - Jan 2022): Developed a two-tower DeepFM model, boosting KakaoTalk third tab CTR by 0–5%; built a sequential recommendation model for Melon, increasing clicks and CTR by +10–15%.
- Implemented diversification methods, improving category coverage by +25–30% with a minor CTR drop; maintained core recommendation libraries.

CHALLENGES

RecSys Challenge 2021. Achieved 8th place with advanced click prediction and target encoding techniques.

NAVER AI Hackathon 2018. 1st place for an end-to-end Korean speech recognition model using CNN + Seq2Seq.

PUBLIC SPEAKING

- Presented at Daangn Tech Meetup on designing a scalable content-based retrieval pipeline (7+ app spaces, 1,000+ daily runs).
- Speaker at Google Cloud AI Summit Seoul '24, discussing Generative AI use cases at Karrot.
- Presented recommendation & NLP papers at the PR12 Paper Reading Study (available on YouTube).
